

## Industry veteran Dan Elftmann Joins Achronix Semiconductor as Director of Strategic Marketing for Industrial, Military and Aerospace Markets

Achronix Semiconductor, the multi-gigahertz (GHz) field programmable gate array (FPGA) company, today announced industry veteran Dan Elftmann has joined the company as strategic marketing director for industrial, military and aerospace markets. In his new position, Elftmann will provide strategic direction on product features and tools by working closely with customers to define specific market solutions.

A veteran of the semiconductor industry, Elftmann has held various technical management and marketing positions for nearly two decades. Most recently, Dan spent six years as the director of product engineering for Actel Corporation. There, he worked closely with the industry's leading military and aerospace companies and participated in a special multi-year task force where he gained in-depth understanding of the quality, reliability and tools needed for their specialized applications. Elftmann holds a bachelors of science degree in electrical engineering from the University of Minnesota.

"Our appointment of Dan Elftmann to this position underscores our commitment to the industrial, military and aerospace market," said John Lofton-Holt, founder, chairman and CEO of Achronix Semiconductor. "Dan's significant experience in programmable logic and his work with the military and aerospace community will serve our customers well as we develop high-performance FPGA solutions for this market".

### About Achronix Semiconductor

Achronix Semiconductor is a privately held fabless corporation headquartered in San Jose, California. Using breakthrough technology, Achronix field programmable gate arrays (FPGAs) can achieve up to 1.5 GHz system performance. Applications include communications, networking, high-performance computing, digital signal processing, aerospace and defense systems, and medical imaging. Find out more at <http://www.achronix.com>.
